

PPD Form

To be compliant for TB, you must complete either a two-step PPD test *or* an IGRA (Interferon Gamma Result Assay). You do not need to complete both. If you choose to have a PPD test, the entire 2-step PPD **must be completed within the month of July 2019**. An intradermal test is required; Tine is not acceptable. PPD tests must be read 48-72 hours after applied. PPD #2 must be completed within 7-30 days of PPD #1. If either the PPD or IGRA is positive, please contact the Office of Admissions. You will need to submit a chest x-ray showing no active disease and the Annual TB Evaluation sheet found on the following page. You do not need to fill out this form if your test was negative. **Do not complete the PPD or IGRA Test early! One of the TB tests must be completed between July 1 & July 31, 2019.**
